Seattle, WA

PROFILE

Technical web programming skills combined with proven creative talents to develop amazing online experiences.

EXPERIENCE

SENIOR WEB DEVELOPER – *Aug 2018 - Present*

Edelman / Washington, D.C.

I began as an intern and rose to the position of Senior Web Developer within a small, dedicated team responsible for fulfilling the web development needs of US clients. I undertook diverse projects, ranging from large-scale custom website builds to interactive creative websites.

- Create custom WordPress templates and plugins using HTML5, CSS3, JavaScript, PHP and various pre processing i.e. Sass/SCSS and babel.
 - Writing and implementing efficient and reusable code that is semantically correct and using best practices.
 - Lead and oversee the execution of new projects, providing regular progress updates to both internal and external teams.
 - Facilitate site launches - including updating DNS, setting up SSLs, deploying code, copying staging environments to production, updating databases and rewriting references.
 - Maintain client sites by updating plugins, addressing security vulnerabilities or adding new functionality and additions.
 - Compose platform briefs outlining the structure of websites/CMS, how the site will be built, where it will be hosted, etc.
 - Contribute to User Experience discovery and competitor content analysis.
 - Explore and stay aligned with innovative techniques for integrating cutting-edge technology into our websites.
 - Participate in the documentation of processes, coding preferences, checklists, and various reference materials that serve as valuable resources for the team, or aiding in the seamless onboarding of new team members.
 - Collaborate closely with fellow developers and make significant contributions to major projects.
-

EDUCATION

INTERACTIVE DEVELOPMENT – *Sep 2016 - Mar 2018*

The Creative Circus - Atlanta, GA
